Alpha Internal Version Instructions

Disable battleye

Disable battleye on the platform where you purchase

Steam:Right-click the game--properties--launch option--add command
(-nobattleye)

[Image 01 — upload pending]

Epic:Click on three dots--launch option--add command(-nobattleye)

Rockstar:Disable battleye

[Image 02 — upload pending]

If you wanna launch battleye to play(without Alpha),restart your computer,delete FSL plugin and clear the command above you typed in!

Download and Registration

Check the download channel in Alpha discord server

[Image 03 — upload pending]

Create a new account in the profile of Alpha launcher

[Image 04 — upload pending]

Installation

Press `install` in launcher and wait for completing

[Image 05 — upload pending]

Install a type of FSL(Only one!),server means the data will upload to rockstar cloud server,and local will keep data in your computer

When you wanna launch battleye,any FSL plugin and mod documents is not compatible!

You need to uninstall above plugins by pressing those two buttons.

[Image 06 — upload pending]

Injection and use

Inject Alpha menu in main interface

[Image 07 — upload pending]

Enter story mode,start a session you need(when battleye disabled,you can't join anyone's session without leaving)

Online-session swap-host any session you want

[Image 08 — upload pending]

When you start a new public session,the ultimate player magnet will toggle automatically

[Image 09 — upload pending]

Don't forget to change language setting

[Image 10 — upload pending]

Key binding

keyboard  show/hide menu

number keyboard   up and down

number keyboard   left and right

number keyboard5 confirm;0 back

number keyboard7 turn up the list 1 flip down the list

If you wanna change key binding,it would effect when the menu is reinjected

[Image 11 — upload pending]

Install character mod(not mandatory)

Download mod archive,extract the whole files into the game directory of GTA

[Image 12 — upload pending]

Simplely speaking,the new plugins(aka the mod files)must in the same folder with GTA5.exe

[Image 13 — upload pending]

Uninstall it in launcher or manually delete all files you paste in the folder

Alpha External Version

Instructions

①Install huorong security center

<https://www.huorong.cn/person>

This means to disable Windows anti-virus system to create a pure environment for Alpha external version

②Delete documents of Mod and FSL

1.Uninstall FSL Mod documents

[Image 01 — upload pending]

2.enable BE delete-nobattleeye code enable on Rockstar launcher either

diagram of enabling BE

Steam:

[Image 02 — upload pending]

Epic:

[Image 03 — upload pending]

Rockstar:

[Image 04 — upload pending]

3.check your account condition

inquiry of BE ban

<https://battleye.dudx.info/>

[Image 05 — upload pending]

if your account is active and you has been kick from BE,it's a false kick,wait for 24 h and it will lift

③Download Alpha external version launcher

Please check the download channel in Alpha server

[Image 06 — upload pending]

④Disable kernal isolation

Disable kernal isolation through launcher,if any interception show up,ignore it,allow it

[Image 07 — upload pending]

Restarting the computer,register your account by pressing-□□□□□

[Image 08 — upload pending]

Diagram of the success of your registration

[Image 09 — upload pending]

[Image 10 — upload pending]

⑥Run Alpha external version

Back to sign in page,enter your account and password,click Start Alpha

[Image 11 — upload pending]

Wait for driver installation and prompt success

□ During the installation of the driver,the computer encounter a blue screen,restart it. This is a normal phenomenon of installing the driver fo the first time!□

(This process may wait for 1~10 minutes, do not close the window in the middle)

[Image 12 — upload pending]

After the above prompt appears, start the game and enter the story mode or online

mode whatever you want

Various types of error tips:

- Windows -Currently only supports W10-22H2,W11-23H2-24H2-25H2 version
- Start Alpha without Restarting Computer
- haven't disable kernel isolation yet
- haven't install huorong to disable Windows anti-virus center

After the above prompt, you need to complete the necessary steps and restart the computer to try

Key position description

key position

keyborad **INS** Call Out/Hide Menu

Numeric keypad⁸ ² Control up and down

Numeric keypad⁴ ⁶ Control left and right

Numeric keypad⁵ confirm,⁰ return

Numeric keypad⁷ Flip up list,¹ Flip down list

You can modify it in launcher- ,restart Alpha to activate the new config!
